New GEZE website in Latvia provides support throughout the building life cycle for planning, construction and operation

Clearly structured and quick and easy to use – the new local website of GEZE Latvia takes digital communication with clients and prospects to a new level. GEZE is committed to using innovative and modern door, window and safety technologies to create exceptionally livable buildings. GEZE's new website makes it even quicker and easier to access the company's products and services.

Information and work processes displayed in a digital format

Planning and operating modern buildings is becoming increasingly complex: The automation and digitization of many building components, coupled with new rules and legal regulations, mean all the experts involved in the life cycle of a building face increasing pressure of complexity. The new website of GEZE Latvia helps clients to optimize their planning and procurement processes. Users can easily incorporate it into their work processes and use it as a work tool.

PRESS RELEASE

from 01/01/2022

The website is easy to navigate, taking users quickly and intuitively to the part of the building life cycle that they are looking for. GEZE local contact details in Latvia are easy to find, and we are always ready to bring services to a new level. Whatever device users access the website from: GEZE product information and product documents are fully accessible and downloadable, even from mobile devices.

Solutions and know-how for every target group

The principle behind the new GEZE website is to provide alliances, planners, lock smiths and buildings owners with access to the information or tools that they need in just a few clicks – content that is relevant to them is just a click away. For planners and architects this means, for example, free access to GEZE BIM door objects and to standard templates for project and product-specific tender texts, as well as to drawings and cable routing diagrams. Users from the manufacturing/processing trades will find installation instructions and installation drawings and videos quickly and easily. The website also allowed the users to gain direct access to download of the necessary technical documentation of GEZE products, along with many other GEZE online services.
